Package 'FactSum'

March 21, 2019

Type Package

Title Calculate the factorial of a large integer.

Version 1.0

Date 2019-03-16

Author Xu Liu

Maintainer Xu Liu <liu.xu@sufe.edu.cn>

Description Calculate the factorial of a large integer, which mey be much greater than the maximum memery of any data type.

R topics documented:

`FactSum-package` *Calculate the factorial of a large integer.*

Description

Calculate the factorial of a large integer, which mey be much greater than the maximum memery of any data type.

Details

Package:	FactSum
Type:	Package
Version:	1.0.1
Date:	2019-03-16
License:	GPL (>= 2)

`fact` *Calculate the factorial of a large integer.*

Description

Calculate the factorial of a large integer, which mey be much greater than the maximum memory of any data type. FactSum implements dramatically fast. It takes only 2.57 seconds to cumpute $10000!$ (it approximates $2.8E+35660$), and 2.98 seconds to compute $10000!$ and `sum=1!+2!+3!+...+10000!` simultaneously.

Usage

```
fact(n,is.sum=FALSE)
```

Arguments

`n`	A non negative integer.
`is.sum`	Logical indicating that fact out sum of all factorial, that is $\sum_{i=1}^{n} i!$, if is.sum=TRUE, and not if is.sum=FALSE. Default is FALSE.

Value

`fact`	The factorial of n, which is a string.
`len_fact`	The digit of factorial of n, which is a integer.
`fact_sum`	The sumation of factorial of n, that is $\sum_{i=1}^{n} i!$, if is.sum=TRUE, which is a string.
`len_fact`	The digit of $\sum_{i=1}^{n} i!$, which is a integer.

Author(s)

Xu Liu

Examples

```
fit <- fact(10)
fit_sum <- fact(20,1)
```
